

TRICARE[®] Vaccine Coverage

TRICARE provides comprehensive coverage of vaccines

TRICARE covers clinical preventive services—which include vaccines—for all beneficiaries. TRICARE covers age-appropriate doses of vaccines that have been recommended and adopted by the Advisory Committee on Immunization Practices for use in the United States. TRICARE coverage is effective the date the recommendations are published in the Centers for Disease Control and Prevention's (CDC's) *Morbidity and Mortality Weekly Report*. Refer to the CDC's Web site at www.cdc.gov for a current schedule of recommended vaccines.

TRICARE Prime enrollees may receive vaccines and other clinical preventive services from their primary care manager or from any network provider without referrals or prior authorizations, at no cost. TRICARE Standard and TRICARE Extra beneficiaries may receive vaccines from any TRICARE-authorized provider (*network or non-network*) at no cost.

Beneficiaries can also receive TRICARE-covered vaccines from retail network pharmacies. Network pharmacies can administer vaccines for measles, mumps, shingles, and many other preventable diseases. The next time you need a vaccine, keep the following things in mind if you would like to visit a retail network pharmacy:

- Although all 50 states authorize pharmacists to administer vaccines, state laws vary on which vaccines may be administered in retail pharmacies. You should contact your pharmacist for more information.
- There is no copayment or cost-share for covered vaccines administered at participating retail network pharmacies.
- Approximately 40,000 retail pharmacies nationwide can administer covered vaccines using the Express Scripts, Inc. (Express Scripts) commercial vaccine network.

For more information, including a retail network pharmacy directory and a complete list of vaccines that are covered at pharmacies, please visit www.tricare.mil/vaccines or call Express Scripts at **1-877-363-1303**. To find a retail network

pharmacy near you, call Express Scripts at **1-877-363-1303** or visit the Express Scripts Pharmacy Locator at www.express-scripts.com/TRICARE/pharmacy.

COVERAGE OF SPECIFIC VACCINES

TRICARE coverage of several of the most popular vaccines is described below. For a current schedule of recommended vaccines, refer to the CDC's Web site at www.cdc.gov.

Influenza Vaccine

There are two forms of influenza (flu) vaccines distributed in the United States: a shot and a nasal spray. TRICARE covers both and follows the CDC's guidelines. Flu vaccines may be received at no cost from any TRICARE-authorized provider or at one of the TRICARE retail network pharmacies that participates in the vaccination program. To find a participating pharmacy, visit www.express-scripts.com/TRICARE/pharmacy or call **1-877-363-1303**.

The flu shot contains a dead virus and can be given to all patients age 6 months and older. This type of vaccine is safe for pregnant women or women who may become pregnant during the flu season, because it can be used in any trimester. Children between the ages of 6 months and 8 years receiving the flu vaccine for the first time should receive two doses, with at least four weeks between shots.

The nasal spray contains a live, weakened virus, and it can be given to healthy people between the ages of 2 and 49.

While TRICARE recommends that all beneficiaries get vaccinated, it is important to remember that certain people are at a higher risk of getting the flu:

- Pregnant women
- People who live with or care for children younger than 6 months

*This fact sheet is **not** all-inclusive. For additional information, please visit www.tricare.mil.*

- Health care and emergency medical services personnel
- Everyone between the ages of 6 months and 24 years
- People ages 25–64 with chronic health disorders or compromised immune systems
- People with diabetes, cardiovascular disease, asthma, or HIV

Human Papillomavirus Vaccine

The human papillomavirus (HPV) vaccine is a limited benefit and may be covered when the beneficiary has not been previously vaccinated or completed the vaccine series.

- Females: The HPV vaccine Gardasil® (HPV4) or Cervarix® (HPV2) is covered for females ages 11–26. The series of injections must be completed before age 27 for coverage under TRICARE.
- Males: The HPV vaccine Gardasil (HPV4) is covered for all males ages 11–21 and is covered for males ages 22–26 who meet certain criteria.

Shingles Vaccine

Shingles is a viral disease that affects more than 1 million Americans every year. More than half of those cases occur in people age 60 or older. TRICARE covers the shingles vaccine

for beneficiaries 60 and older. The shingles vaccine Zostavax® is in high demand. If you would like to receive this vaccine, please check with your provider or pharmacy to ask if it is available.

Note for TRICARE For Life (TFL) beneficiaries: Medicare only covers the shingles vaccine under Medicare Part D (*prescription drug plan*). For TFL beneficiaries who do not have Medicare Part D, TRICARE will be the primary payer for the vaccine. Beneficiaries may get the shingles vaccine from any TRICARE-authorized provider (*network or non-network*) or from a TRICARE retail network pharmacy. TRICARE Standard and TRICARE Extra deductibles and cost-shares apply. The cost-sharing waiver does not apply to TRICARE beneficiaries who are Medicare-eligible.

NON-COVERED VACCINES

Immunizations recommended specifically for travel outside the United States are not covered, except for immunizations required for active duty family members whose sponsors have permanent change-of-station orders to overseas locations. These immunizations are covered as outpatient office visits.

Note: You must include a copy of the sponsor’s change-of-station orders when filing the claim.
