

Introduction

Our Mission is to support TMA Health Plan Operations and the enterprise through managing and coordinating the development, implementation and sustainment of information systems that interface with and are used by TRICARE purchased care contractors.

Technical Partners

- Strategic Planning Enterprise Architecture Requirements
- Defense Manpower Data Center
- Defense Health Services Systems
- Tri-Service Infrastructure Management Program Office
- Defense Information Systems Agency

Business Functions

We develop functional requirements and business processes that support the provision of health care services for the uniformed armed forces and their family members. We also lead the development and management of systems integration and operations. This is achieved by the coordination of data/system requirements with Government and private entities in support of the TRICARE contracts.

“Coming together is a beginning.
Keeping together is progress.
Working together is success.”

The Team
